PRESIDENT MESSAGE

It is now time again to bid farewell to the final year undergraduate students. I am happy that yet another issue of DRUSHTI is being published.

It is indeed a matter of gratification that our first grade college is doing extremely well in all aspects of enhancing the capabilities of a student and prepares the student for facing the challenges of life.

Under the dynamic leadership of Dr. R. Parvathi, the college is progressing well in all facets.

The number of activities that have been organized throughout last year is a testimony of the leadership.

I also compliment the HODs and faculty members for actively involving themselves with commitment and dedication. I wish the students all success in every endeavor.

HON. SECRETARY MESSAGE

VET First Grade College envisages the Vision of Vasavi Educational Trust by setting up the success in youth both in terms of curricular & extracurricular activities.

College pedagogy is designed to provide each VET n's with the proper guidance and direction to be successful in achieving their academic goals along to reach the professional success.

Dhrusti reflects on the achievements & success of students & their interest in the areas of desire. I do appreciate and applaud the Principal & her editorial team for successful completion of this tedious yet daunting task of putting together the myriad thoughts and dreams of our students and faculty into a meaningful and delightful visual fest called "Dhrusti"

May all our students soar high in uncharted skies and bring glory to

the world and their profession with the wings of education.

Warm greetings to my young friends.

Graduation is a stage of life in which many will have mixed bag of feeling proudness, achievement, satisfaction where one fulfill our vision to "Educate enlighten & empower" successfully because, I believe with my experience that success comes to those who work hard & stays with those, who don't rest on the laurels of the past.

Yet another successful year with great academic learning with progressive results. Drushti our annual magazine marks our growth unravel our imagination gives birth to our thoughts & aspiration. It unveils a wide spectrum of creative skills of each individual bringing out the best.

It has collection of student's articles own or collective ideas, faculty achievement, projection of various curricular activities, NSS activities, NSS Special Camp, National & State level seminar, intercollegiate competitions, Sports activities, literary activities conducted throughout the year for overall development of our students.

Three state level seminar, three National level seminar more than hundred workshop, seminar, guest lectures, career orientation programmes, short term certificate courses in every stream that college offers. Students have successfully enjoyed learning &learning goes with a achieving good results & this year students have bagged exemplary, distinctions and also rank by BSC FAD at University level.

Before I conclude, a piece of advice as coated by APJ Abdul Kalam "Don't take rest after your first victory because if you fail in second. More lips are waiting to say that your first victory was just luck".

Akraya Samantranna-2017

State level seminar

Akraya Samantranna is a regular annual feature of V.E.T First Grade College PG Centre under the banner of Commerce forum – Vanijya Dhara. It is a platform for post-graduation students across the state to present their views and opinion on the theme of current relevance in Commerce and management. This was initiated by the first batch of M. Com students in 2015-16 exclusively for post-graduation students to deliberate on burning issues and prepare them for their future endevours.

The third edition of Akraya Samantranna had the theme on "Mergers and Acquisitions of Banks – A Boon or Bane" on the 8th Nov 2017. The event witnessed participation from 10 colleges comprising of over 120 plus students including the organisers. The colleges include Al Ameen college, St Claret College, T John, Vijaya evening college, Jyothi

Nivas, SKR Kanakapura college, Abbas Khan College, Don Bosco, Sri Krishna College etc.,All the paper presenters shared their work on Mergers and Acquisitions – popularly known as M&A based on both primary and secondary data. Recent mergers of SBI with its associates, Kotak with ING and many more were widely debated sharing vital statistics and impact on profitability and other key indicators in the banks.

The best paper award was bagged by Ms. Yukthi and Ms. Raksha of Vijaya Evening college who presented their paper based on primary research conducted on the title "Impact of Amalgamations on Banks – An empirical Study. The second-best paper presenter went to Ms. Nithya and Mr. Chandrababu of T John College and third prize went to Ms. Vaishnavi & Ms. Pragyna of Jyothi Nivas college. The talents of the students were judged by eminent judges Dr. Ravikumar, HOD and Coordinator at National College and Prof Sunil Kumar, HOD of Commerce, Dayanand Sagar College.

The event would not have been possible without the generous and ever encouraging support of management members Sr B R Viswanath Setty, Sri Manandi N Suresh and others. The brain and soul behind this eventful and intellectual gathering was our principal and Academic Director Dr. R Parvathi and the entire team of Commerce Department. All the participants appreciated the arrangement and organising ability of the college and complimented the sumptuous lunch and hospitality extended.

The entire day was a day well spent with participants and faculty taking home rich experience and information. Overall it was an eventful Nov 8th, 2017 at VET FGC. The seminar concluded with Principal showering accolades and praises to the PG Coordinator Ms. B Rammya and the faculty team members, student organisers, thanking the participants from various colleges and promising to host the 4th edition of Akraya Samantranna with increased vigour by the incoming batch of 2017-the baton being passed!

Truly Akraya Samantranna was a "seminar by the students, of the students and for the students"!!!

A Tradition that continues....

On 31st January 2018, the annual cultural programme of VET First Grade College Culrav was held in B V Rathnaiah Setty Sabhangana, in the VET Campus in a befitting manner. The day began on a very auspicious note with the invocation of God's blessings followed by the official inauguration of the fest by all esteemed dignitaries. The function was presided by chief guest – MC Venugopal, KPCC, General secretary, B R Viswanath Setty, President VET FGC , Manandi N Suresh, Honourable Secretary,

Dr R Parvathi, Academic director and principal of VET FGC welcomed the gathering and introduced Chief guest Mr M C Venugopal, KPCC, general secretary and heartily thanked the management for the enormous support in all curricular and extra-curricular activities. The chief guest delivered valuable speech and distributed centum award for the faculty who gave 100 % result in their subjects and prizes for the champions, outstanding, exemplary and distinction students for their achievement. The event of the day – long programme included Kamsale, Bharathanatyam and Fashion show as inaugural event, and solo song, solo dance, group song, group dance and skit which showcase the talent of students. The next event on the stage was solo singing where enthusiastic participants sang their hearts content in the bid to win a prize. Followed by dance event! Dancers gave their best shot and it turned out to be pure entertainment.

Winners of the competitions awarded with certificates, trophies in the Intra College events. However everybody enjoyed the cultural function and highly appreciated the organisers. The function revealed many aspects of our cultural before the audience.

Although academics are important, it does not hurt once in a while to go out and have fun and discover new things and learn outside the classroom. These cultural events gave us the opportunities to exactly to do so. A big thank has to be said to the entire faculty and other heroes who cooperated and helped us in releasing our hidden talents. At the end of the day we do believe that "All work and no play make Jack a dull boy".

The college's Graduation Fashion Show titled FACCIO-2017,....radiance of elegance, for the graduating designers of 6th semester was organized in B.V Rathnaiah Setty Auditorium as a part of their course requirements of the subject "Fashion Portfolio and design Collection" under the Bachelor of Fashion and Apparel Design curriculum of Bangalore University. Chief Guest of the function was Ms. Roopa Surendranath, past Treasurer, Association of Inner Wheel Clubs of India.Prof. Premakumari.H.N evaluated our student's portfolio .

Sharan.S bagged the Best Designer award, Seema Chandra walked away with Overall Presentation, Ms. Karunya.S.N won best Choreography award, and Mr. Manjunath won for best Theme, Ms. Kavitha won for Best Make Up and Hairtyle, Ms. Neeta's collection won Viewer's choice award, Ms.Indu.S.P won for Best Accessories and Props. Human Rights
One Day State Level Seminar In Association With Karnataka Institute For Law and Parliamentary Reforms

VET FGC organised a one-day state level seminar on Human Rights on 28th February 2018 at VET Auditorium in association with KILPAR. Human rights are moral principles or norms that describe certain standards of human behaviour and are regularly protected as legal rights in municipal and international law. The programme commenced with seeking the blessings of almighty this bringing a divinity to the environment and followed by auspicious lamp lighting. Sri Narayanswamy S G, Vice principal, VET FGC welcomed the gathering of enthusiastic students and faculty. Dr Reviah Odeyar, Research Head, KILPAR started the seminar by delivering key note address.

Dr R Parvathi, Academic Director and Principal, VET Colleges, delivered the programme address and briefed the audience about the various aspects regarding the human rights to be discussed during the entire day. Ms. Nagalaskshmi Bai, President, State Women Commission, rendered the inaugural address which was an emotional, inspirational and motivational address. She touched on issues like human rights and women, harassment, child issues and gave many live examples. Chief Guest Sri Srinath, Principal secretary, Law Dept, also enlightened the gathering on the various issues relating to human rights. President Sri B R Viswanath Setty delivered the presidential address and highlighted the importance of human rights in individual lives. Honorary Secretary Sri Manandi N Suresh expresses his valuable opinion on the topic. The formal program ended with vote of Thanks proposed by Mrs. Gowri Hebbar, Asst Prof, Dept Of Commerce. The master of Ceremony for the programme was Mrs B Rammya, PG Coordinator, VET FGC.

The seminar was divide into 3 technical sessions on Human rights and Constitution, Human Rights and Women and Human rights and Human Rights and the depressed classes.

The first session was started by Asst Prof Mrs Shalini, Dept of Commerce giving a brief profile of the speaker Dr. K.B.Kempegowda, Principal, Vivekananda Law College. He spoke on Human rights enlightening on various rights that an individual has, how a right need to be exercised by citing many case studies, various basic and special rights available as per our constitution giving various real-life examples. His session was well received by the audience.

The second session began with Asst prof, Mr. Rangaswamy giving a brief introduction of the speaker Dr. Krishnappa, Asst Prof, Maharani Lakshmi Ammani College. He spoke on various issues relating to human rights and women, how can a woman protect their human rights, their position and importance in the society, evolution of modern day women and concluded that a country can develop only when the women progresses in their lives and this requires the awareness among women among their basic human rights.

The audience posted question after the first and the second session regarding the rights of girl in ancestral property and many other issues. It was an excellent deliberative session.

The third session began after lunch and was commenced by Asst prof, Mr Vinod Kumar, Dept of Commerce introducing the speaker Dr. Subramanya Swamy. He spoke on human rights and depressed class including SC/ST/economically and financially backward people, rights of labourers, drain / seweage cleaners etc.

The programme concluded with honouring the session heads of three technical session and the master mind behind the entire programme Dr RevaiahOdeyar. Overall the entire programme gave the students and faculties a great insight about human rights, when, where, why and how should it be exercised, how it shouldn't be misused and many more. A day well spent learning and deliberating on human rights.

Post Colonial Debate-Nation, Race, Gender And Cultural Identity
One Day National Level Seminar

VET First Grade College, Department of languages and IQAC in collaboration with Bangalore University English Teachers Association organized a one day national level seminar on the 9th of March on the Topic Post Colonial Debates – Nation, Race, Gender, and Cultural Identity, with sub themes –De-colonisation –Politics of Representation – Post colonial theory, Gender celebration –Neo Colonialism –Retro –Aura –Diaspora, so on and so forth.

The Inaugural session started at 10 am in the college auditorium. After lighting of the Lamp by the Dignitaries. Principal and Academic Director Dr. R Parvathi welcomed the guests and the gathering.

G Sridhar Additional Secretary to the Government of Karnataka inaugurated the seminar with his Inaugural Address highlighting the gender issues. Dr. Madhav Prasad from the department of Cultural Studies of EFLU from Hyderabad was the keynote speaker. Dr Natraj Huliyar representing Bangalore University gave an inspiring talk and touched all the themes of the topic.

B.R. Viswanath settty President of the Vasavi Educational Trust Presided over the over the deliberations of the seminar and appreciated interest of the Paper Presenters in sharing the knowledge on the topic, Manandi N. Suresh Honorary secretary of the trust congratulated Dr R Parvathi and her team for their commendable handwork & efforts.

58 articles were presented by Professors Research scholars, Post Graduate Students from surrounding states and colleges in Bangalore. Has a father in the cap all the presented papers were printed in a book form with ISBN # 9789381-9796-81, which was released during the inaugural session by the dignitaries on the dias and the first copy of it was handed over to Dr R Parvathi Editor in Chief.

The paper presenters were divided into five groups which were chaired by Academicians from other colleges. The scholars made their presentation in these sessions – which were interactive and informative –leading to an enriching experience.

Elaborate Hospitality arrangements were made. After a break for Coffee and snacks, sumptuous Lunch was served at 2pm.

The Valedictory address was delivered by Dr Geetha Bhaskar Head of the English Department, Bangalore University.

College is happy with BUETA and special regards to Dr Thamiah General Secretary of BUETA

Dr R Parvathi gave her closing remarks and felt very happy at the outcome of all the hard work and efforts put by Neeraj Gupta and her team.

ONE DAY WORKSHOP ON – NEW ACCREDTATION GUIDELINES OF NAAC

On 25th September 2017 , VET First Grade College in association with BU Principal Association and CESS(Center for education and social studies) conducted one day workshop at VET College, B.V Rathaniah setty sabahangana on " New Accreditation Guidelines of NAAC". The welcome address was done by Dr. M Jayappa , president of Bangalore University First Grade College Principals Association.

The Mother Earth

Lives are crying because its not green,
Earth is dying because its not green
Earth is our dear mother, don't pollute it,
She gives us food, shelter, just salute it,
With global warming, its in danger,
Let's save it by becoming a strong ranger....

With dying trees and animals, its in sorrow,
Make green today and green tomorrow..
With melting snow, one day it will sink,
How can we save it, just think it..
Trees are precious, preserve them
Water is a treasure, reserve it
Grow more trees, make mother earth green
Reduce pollution and make her a green....

SUHAIL PASHA
IV SEM BBA

PUBLICATION, PRESENTATION & OTHER ACHIEVEMENTS

Dr. R Parvathi, B.com, M.Com, M.Phil, DCA, CIC, Ph.D in finance, Ph.D in commerce

- Published a paper entitled 'A Study on Procrastination at workplace' in International journal of recent research in Commerce, Economics and Management on December 2017.ISSN 2349-7807.
- Published a paper entitled 'Languages-Imperative For Final Year Degree Students' in International journal of research in Commerce, IT and Management on FEBRUARY 2018.ISSN 2231-5756.

Deepika. K.R, MCA
Department of Computer Science

- Attended a one day Faculty Development Programme on "JAVA" in November 2017.
- Appointed as an internal examiner for practical exams from Bangalore University for semester exams.
- Guided students regarding semester projects.
- Successfully organized seminar for BCA students.
- Successfully organized and conducted various college events.

Sri Gowri M P., M.COM
Department of Commerce

- Published an article on the international journal IJCBM, on the topic "Post GST emerging challenges and issues" dated 31st December 2017.
- Abstract: General approach to overcome the problems of GST seems unfruitful at times. This is when remedial model come to our support. We have proposed a model to incorporate it in different circumstances or issues. When the merits and demerits were studied, there were few issues and challenges about post implementation of GST that arose. Hence, this paper is an attempt to propose a model to overcome such issues and challenges arising after the implementation of GST at different organisations. These are easily adoptable, simplified remedies for the organisation that is proposed in the model.

Environmental Protection

Environmental protection is a practice of protecting the natural environment on individual, organization controlled on governmental levels, for the benefit of both the environment and humans. Due to the pressures of overconsumption, population and technology, the biophysical environment is being degraded, sometimes permanently. This has been recognized, and pranith have begun placing restraints on activities that cause environmental degradation. Since the 1960s, activity of environmental movements has created awareness of the various environmental problems. There is no agreement on the extent of the environmental impact of human activity and even scientific dishonesty occurs, so protection measures are occasionally debated.

The National Environment Policy of 1997 acts as a framework for environmental decision making in Tanzania. The policy objectives are to achieve the following:

- Ensure sustainable and equitable use of resources without degrading the environment or risking health or safety.
- Prevent and control degradation of land, water, vegetation and air.
- Conserve and enhance natural and man-made heritage, including biological diversity of unique ecosystems
- Improve condition and productivity of degraded areas
- Raise awareness and understanding of the link between environment and development
- Promote individual and community participation

Save Environment

Introduction: Our natural environment and surrounding provides us with everything that we ever need. We get air, water, food, and everything else from the environment.

Why should we save environment?

1. Global warming is a serious environmental issue. The continuous emission of carbon dioxide by thermal power generating units is the leading cause for the surge in greenhouse gases.

2. Natural resources are limited . If the natural resources such as oil, coal, ect . are used, one day the world may fall short of these resources.

3. High-level of environmental pollution is detrimental for human and animal health.

4. Forests are fast depleting. It may cause soil erosion and drought situation.

5. Excessive use of pesticides and contamination of soil have negatively affected soil output. These fruits and vegetables are not very healthy for human health.

How to save environment?

- We should save drinking water. Water is a precious component of our environment. It should never be wasted.
- We should never pollute water. Efforts should be made in making significant reduction in both domestic and industrial disposal in water bodies.
- As far as practicable, the waste product should be segregated as recyclable and non-recyclable before being dumped.
- There should be a zero tolerance policy towards deforestation. Each one of us can contribute towards saving the environment by planting just one tree every-month.

SwACHH BHARAT:

Introduction: Prime minister Narendra Modi launched the swachh bharat mission (SBM) on October 2, 2014, the birth anniversary of Mahatma Gandhi. The ambitious programme aims to make the streets, roads and infrastructure across the country clean by October 02, 2019. The 150th birth anniversary of the father of the nation. It is India's biggest ever cleanliness drive.

Conclusion:

Though the government is putting forward its best efforts, yet we have so far not received the desired result on the front of cleanliness. There is need of an attitudinal change on the mission of a clean India in its true spirit.

Save Environment

The term 'save environment' can be referred as 'protection of environment.'

Environment does not mean only of organically substances, but also includes each and every parts of world's creations and even human beings. If human being feel of securement protection of their lives, then there is a great necessity of protecting the environment too.

Now, it is an important need to know about how environment is affected by the activities of human beings, which had caused hazardous pollution of environment. Due to the pressures of over consumption, population and technology, by the biophysical, environment is being degraded, sometimes permanently.

Currently, in India a noted term called 'swacchbharathabhiyan' of which it's objectives an achievements are heard by all of us, wherever we go. And how it had helped for the protection of environment

Environment protection/safe could be maintained by several ways, which are as follows;

- Apart the dry and wet wastage.

- Usage of cloth or paper bags, instead of plastic.

- To get rid from the objects containing mercury.

- Using electricity in a proper way.

Use plant and trees to shade your home, as you can save money on air conditioning.

Technology Is A Boon Or Bane

Technology today is an integral part of everyday life. Rapid advancement in the field has increased the pace of life, effectively coordinating reality with imagination. Technology is one of the greatest invention of mankind. It is so powerful that it shapes our thinking and our way of life within no time. It is ever evolving. Technology is a tool invented and sharpened by humans to make their life easier.

I feel the best technology breakthrough was the invention of computers which basically led to further advancement in technology that is the creation of many software and hardware. Technology has gifted mankind with various boons but look closely and you will realise that technology have blessed mankind with two very important aspects- facility of communication and creation of time.

Technology these days has advanced our lifestyle. Things have become so easy. Technology is being used everywhere and in everything. Technology can decrease the time it takes to accomplish a task, which can ultimately save money and increase productivity. Communication speed also increases. Instead of sending a message by postal mail, using email or fax can deliver it instantaneously. Technology can also speed up various manufacturing processes, as machines and computers can do work that once performed by humans more quickly and efficiently.

Having access to information any time it is needed is a major benefit of technology today. Most companies, no matter how large, have systems which allow their employees to access or enter necessary data quickly and efficiently, which saves time.

Another area is advancement in Health care. Improving quality of life is one of the main benefits of integrating new innovations into medicine. Medical technologies like advanced surgeries, better monitoring systems and more comfortable scanning equipment are allowing patients to spend less time in recovery and more time enjoying a healthy life.

Education is yet another area where technology is having a major impact. Students can find almost any academic material or answer to a research question just by using online resources or academic databases. Not only is it easy and simple to use, it is also inexpensive, as many sites do not charge for information that used to be accessed only by purchasing a membership or journal. Networking and Communication Technology has also allowed social media to be used for educational purpose.

Technology can offer a wide array of tools that can streamline their day to day work and get multiple work done in a short span of time. Technology is important but it is time humans decide where to draw line.

"Technology and machines were created to aid us and not be our masters. Think wisely as where technology is leading you to?"

Swachh barath abhiyan

The Swachh Bharat Abhiyan is the most significant cleanliness campaign by the Government of India. Shri Narendra Modi led a cleanliness pledge at India Gate, which about thirty lakh government employees across the country joined on October 2, 2014, the birth anniversary of Mahatma Gandhi. The ambitious programme aims to make the streets, roads and infrastructure across the country clean by October 02, 2019, the 150th birth anniversary of the Father of the Nation. It is India's biggest ever cleanliness drive.

The Prime Minister has helped spread the message of Swachh Bharat by urging people through his words & action. He carried out a cleanliness drive in Varanasi as well.

He wielded a spade near River Ganga at Assi Ghat in Varanasi under the Clean India Mission. Sanitation has emerged as a key issue since the 2011 Census highlighted e glaring data on lack of toilets in the country by stating that over 26 million people in India defecate in the open which reflects on health problems that roughly half of the Indians families have to deal with due to lack of proper toilets in their homes.

Swachh Bharat Mission aims to achieve the elimination of open defecation in the country. Among its other objectives are conversion of insanitary toilets to pour flush toilets, putting an end to the inhuman practice of manual scavenging and carrying out Municipal Solid Waste Management

But the success of Swachh Bharat Mission depends on the society as a whole with every citizen of the country required to contribute towards improving the levels of cleanliness in the country that would help in progress of our country and also creating awareness to Indians

Though the government is putting forward its best efforts, yet we have so far not received the desired result on the front of cleanliness. There is need of an attitudinal change on the part of all citizens to fulfill the mission of a clean India in its true spirit

Technology Is Boon Or Bane

An excess of anything does more harm than good technology is a boon only when it is used judiciously and sparingly just when it is really required. Unfortunately in today's world technology is more often used, or should we say over used and misused!

Technology is a useful servant but a dangerous master said Christian Lous Lange. Gone are the days when it was a useful servant. It has now turned into a monsterous master, controlling people of all age groups. We have become slaves of technology by indulging indiscriminately in spending time either watching television, idly surfing on the internet, being always active on social media, Facebook, Whatsapp, Instagram etc.

We are now more in touch with people we meet in the virtual world than the people we see everyday including our own family and relatives. We have lost touch with reality and live in a make believe world of the internet "sharing is caring" yes it is true but it is not the opposite sometimes especially when it comes to sharing incorrect information and propagating lies and false facts with just a click on the forward button. The same technology that allows a surgeon from a far off place help out in conducting an operation in a remote village, also fuels flames of hatred and ignites violence in places.

Small children have become so addicted to use of mobile phones that they don't want to socialize anymore, they don't want to indulge in games that keep them active physically. How can a child who spends most of the time playing games on the mobile especially games that promote violence, be expected to grow up to be a kind and caring individual who shows empathy to anyone around? One may argue that the all knowing Google helps us to find information by just entering a word, but we turn to Google without even making an effort to first search our brains to find the information.

"Humanity is acquiring all the right technology for all the wrong reasons" said R. Buck Minister Fuller. Thus, technology is more a bane than a boon.

Positive side of education system

Students go to many exams in their learning year. It teaches to analyze our Strengths and weaknesses consistently.

Indian education system emphasizes competitive spirit competition teaches students spirit.

Competition students to unleash their full potential.

Indian school teaches basic knowledge in all subjects.

Annual system in school year helps slow learner

Drawbacks of Indian education system

1. Rote learning .Emphasis on memorizing the facts rather than thoroughly understanding the concept

2. Completely relaying on text book

3. Giving more importance to next books than the teacher there is no Autonomy to teachers

4. Students have no freedom to think creatively and to Question he content in the text book

5. Indian government is spending only 3% of its GDP on education

6. As the government unable invests enough in the education sectors, private institution roped in, and the results is high cost of education

7. No control of government on fee structure of private educational institutes

8. Ethics are not being taught in school and the result of this is many educated persons lack ethics

Present education in India

1. Department of school education and literacy

2. Department of Higher education

There are variations in

1. Academic session

2. Age for admission to 1st class

3. Compulsory education

4. Number of classes constituting the primary upper primary, high and higher secondary schools

3. Stages of public examinations

Apart from the above mentioned there are other variations as well

1. Pre Primary stage

2. The primary stage

3. The middle stage

4. The secondary stage

5. Senior secondary stage

6. Under graduate stage

7. Post graduate stage

Present Education System

"Learning gives creativity, creativity leads to thinking, thinking provides knowledge, and knowledge make you great"

A P J Abdul Kalam'

Education is the most vital asset of any nation developed or developing. Education, it is something that should teach us about something new and improve our knowledge. But right now, the education system in India is only based on memorizing. We just have to remember the words and put it in test. Since, we student do not understand the teaching in schools and colleges, students have to go to coaching classes and extra tution.

"Education is our passport to the future, for tomorrow belongs to the people who prepare for its todays".

Today's Education system in India is challenging but needs some changes. The education system in India put more emphasis on the theoretical knowledge than the practical. The quality of the education must be improved rather than the quantity. Smart classes must be improved. Video based lessons must be improved so that students can understand concepts better.The Education system in India has seen many ups and downs, but at the same time it has produced some brilliant gems, who are raising the flags of India across globe.

Few highlights of the Present Education System:

1) Technology: The technology in life as well as in education system has changes the face of education system in India. The different technologies introduced in learning such as use of internet connections, interaction with teachers, students across globe has become easy.

2) Unlimited options: Earlier the career options were limited. Now in the current scenario, the opportunities has opened. The arms to embrace the ones, who are able to identify their talents.

3) Cost of education: The cost of education has definitely increased to multiple level as compared to the early years, but in private education institution money is being flown endlessly for the betterment of students.

Challenges in Present Education System:

* Lack of will to learn in youth: Because they are unable to adjust for long period in class rooms, the ability of teachers to inspire students in decreasing day to day. Because of this, people are becoming bookish knowledge in present education system.

* Quality of teaching: Now the quality of education must be improved rather than the quantity.

* Reservations: There should be no difference between forward caste and backward caste. These are reservations for government jobs also, if the backward caste students just passes his graduations if more than sufficient to get that government jobs.

* Infrastructure: Infrastructure provided today in any college is not that efficient as it should be. In government schools there are no proper class rooms, efficient staffs etc…

Children in the present education system are more focused towards their career.

E-Education is becoming popular in the present scenario. It's times for India to think the current educational setup demand and changes.

Ramya M
IV Sem Mcom

Present Education System

Why India still stood as a developing country but not as a developed country? This question can gain answer by viewing our educational system at present.

What is the real meaning of education? Simply memorizing the facts and writing the examination?No, the real meaning of education is learning facts and thinking about it in a innovative manner that Where it is useful and how to apply. Our present education system has its own merits and demerits.

In olden days. Guru kulas systems were followed and it was the only source to get value based education. But, at present there is vast improvement in the education system. Earlier, Black board was the means to teach the students, but now there are many technologies used to teach the students which indeed is very helpful. Projectors are the present source to teach the students. Students remember well by seeing pictures. Project works and field works given to students of high grades help them to learnthings practically. Technology has brought vast change in the present education system and is also very helpful.

Though education system is providing a large number of graduates. They lack basic communication and problem solving skills. The education system should be un sync with the world and innovation. Talents cannot be measured by marks. So, we need to have the Different measurement system which can measure the talents, skills and hidden potential of the students. Every kid is special, they all have gifted but with a different gift. The education system should provoke thought process so that students know their inclination early in the process.

Indian education system has its own merits and demerits. We need to reduce drawbacks in it. Then only our country will stand as developed in front of the world.

Fashion Trends In 1980s

In the 1980s it was all about leggings, hi-tops. With the dawn of the digital age, and the way that fashion is sold many fashions have come into light and some of the old fashions of the 80s have been booted out. But mullet haircuts aside, some fashion items have stuck with us and dont seem to be going anywhere. What is still on the market today and what has been thrown away as a fashion faux pas? Has fashion really changed that much in the past 20 years?

The 1980s were all about big hair, big jeans and just about big everything not forgetting tight jeans at the beginning of the 1980s. A lot of the 1980s were about both men and women trying to be creative, and the fashion certainly reflected this with big, bold prints on clothing and the colours also rather striking

Some famous 1980s trends were such styles as shoulder pads and miniskirts for women, and parachute pants for the men. However, some of the styles that were popular back then have slowly made their way back onto the market leggings back then were a popular item, and are seen all around the UK today being sold by retailers, wholesalers and independent shops alike. The same goes for the miniskirt an item of clothing that has stuck around, and it still worn frequently today seen on the clubbing scene..

The 1990s kept some of the boldness of the patterns from the 1980s, but a lot of clothing was influenced by the Hollywood and film industry as well as the music industry. Grunge was a popular music, what with the creation of bands such as Nirvana, Soundgarden and Alice in Chains; and with this, the clothing scene changed too, reverted to more subtle colours as opposed to the 1980s neon-type colours. Doc Martens also hit a popular streak, related to the grunge scene, however a fashion style that does seem to be coming back, with the reappearance of tie-tops.

Fashion Trends In 1980s

FASHION is a popular style or practices especially in clothing, footwear, accessories, makeup, hairstyle & body. Fashion is a distinctive & often constant trend in the style in which a person dresses.

1. FASHION in 1980 : Women's clothing in 1980 ran the gamut from conservative to opulent fantasy. 1980 witnessed a revival of the classic "preppie" look that began in New England. International fashion was influenced by American sportswear more so in 1980 than it had been since the jeans of the 60s. VELVET was popular around the clock and woman wore lace with tweeds and leather. Men's dressing styles changed very little in 1980.

2. FASHION in 1981 : HEMLINE LENGTH was now completely up to the wearer's preference. Designers got extremely inventive with pants like balloon, pants, breeches, Bermuda shorts and styles that were puffy around the hips and taped around the ankles. Gold, copper, brass and other metals appeared on blouses and skirts.

3. FASHION in 1982 : The most successful styles were moderately subdued, in durable fabrics that required little unkeep and in quite, basic colors. In 1982 sportswear is adopting well to everyday contemporary needs.

4. FASHION in 1983 : Japanese designers dominated the fashion world in 1983. The new style was innovative in its approach. Clothes were cut so full that there was no need for sizes. One size for everyone. Resort clothing also known as summerwear was quite popular. Basketball shoes and athletic-licensed apparel was extremely popular. T-shirts were probably the most popular casual piece of clothing and also the denim jeans were popular.

5. FASHION in 1984 : Women's fashion was dominated by what was at the time known as menswear. A typical outfit would consist of a sports jacket, trousers and a big overcoat. Separates were very important. A sweater could be swapped for a blouse, jackets could be worn with skirts or pants and large overcoats could on top of anything.

6. FASHION in 1985 : It was around this time that fashion was starting to splinter off into so many separate factions that its difficult to summarize. The bottom line is the fashion industry was changing forever.

7. FASHION in 1986 : The most promising new designer in the U.S. was 23-year-old Marc Jacobs who released fanciful designs that ran from battle jackets in printed satin to princess dresses with petticoats. Mink was the fur of choice in 1986. As women moved into better-paying professionals.

8. FASHION in 1987 : The resurgence of the short skirt. The new hemlines bared the knees and sometimes went to mid thigh. Later women jumped the gun and began rolling up the waistbands or turning up their hemlines on their linger outfits to accommodate the new trend before the shorter fashions hit the stores.

9. FASHION in 1988 : The extreme femininity displayed in 1987 was a little more subdued in 1988. In the spring of 1988, Channel introduced a handful of suits with long, narrow, elegant skirts. Trousers made a strong comeback in 1988.

10. FASHION in 1989 : The fashion focus in 1989 was on jackets as the staple of most women's wardrobes. Linen, wool and silk were the fabrics of choice. Several designers wanted smaller shoulder pads. Designers in U.S. had a very successful year in 1989. Fendi, the Roman fashion house best known for the fur coats, released reversible coats that could be worn either leather side out or fur side out. The coats were made without linings.

TOP 10 80's FASHION TRENDS :

Shoulder Pads, Mini Skirts, Leg Warmers, Huge Earings, Fingerless Gloves, Parachute Pants, Members Only Jackets, Units, Stretch-stirrup Pants, Oversized Tops

Fashion will keep changing from years to years but the few trends which are followed even today are Animal Print, Crop Tops, Power Suits, Shoulder Pads, Denim Jackets, Drop Crotch Pants, Fanny Packs, Funky Fur, Low Cut-High Suit Gowns, All-White Ensembles. This is the reason there is a proverb OLD IS GOLD even today we use these trends by this we can say the 1980s trends are very interesting, creative, innovative and used till date.

Save environment swach bharat

Prime Minister Narendra Modi launched the Swachh Bharat Mission (SBM) on October 2, 2014, the birth anniversary of Mahatma Gandhi. The ambitious programme aims to make the streets, roads and infrastructure across the country clean by October 02, 2019, the 150th birth anniversary of the Father of the Nation. It is India's biggest ever cleanliness drive.

Sanitation has emerged as a key issue since the 2011 Census highlighted e glaring data on lack of toilets in the country by stating that over 26 million people in India defecate in the open. Launched with an estimated cost of around Rs 62,009 crore, Swachh Bharat Mission aims to achieve the elimination of open defecation in the country. Among its other objectives are conversion of insanitary toilets to pour flush toilets, putting an end to the inhuman practice of manual scavenging and carrying out Municipal Solid Waste Management (MSWM).

Launching the mission, Prime Minster had nominated nine famous personalities for the campaign. They joined the campaign and nominated nine more people. Thus, the momentum has been built with people from all walks of life joining it. Eminent personalities such as Aamir Khan, Amitabh Bachchan, Kailash Kher, Priyanka Chopra and leading sportspersons like Sachin Tendulkar, Sania Mirza, Saina Nehwal and Mary Kom are part of the SBM.

The urban component of the mission is being managed by the Union Ministry of Urban Development. Around three million government employees and school and college students of India participated in the event in its initial phase. The rural component of the mission is being handled by the Union Ministry of Drinking Water and Sanitation.

The mission aims to eradicate open defecation by 2019. Prime Minister while launching the SBM, called for making the goal of Swachh Bharat as a mass movement, with people taking a pledge to neither litter, nor let others litter.

Citing a World Health Organization estimate that an average of Rs. 6500 per person was lost in India due to lack of cleanliness and hygiene, the Prime Minister emphasised that a clean India would make a significant impact on public health. It would safeguard income of the poor, ultimately contributing to the national economy. He underlined that sanitation should not be seen as a political tool, but as manifestation of patriotism and contribution towards nation-building.

The mission aims to eliminate open defecation by constructing toilets for households, communities; abolishing manual scavenging; ushering in advanced municipal solid waste management practices; encouraging private sector involvement in the sanitation sector and last but not the least by bringing about attitudinal change with regard to sanitation.

Sikkim, Himachal Pradesh and Kerala are the three states that have been declared Open Defecation Free (ODF) this year. As per government data, as of December 16, over 58% of Indian households have become open defecation free. According to the Union Ministry of Drinking Water and Sanitation, Haryana, Uttarakhand, Gujarat and Punjab will achieve the ODF status by March 31, 2017.

Though the government is putting forward its best efforts, yet we have so far not received the desired result on the front of cleanliness. There is need of an attitudinal change on the part of all citizens to fulfil the mission of a clean India in its true spirit.

Save Environment (Swachh Bharat)

If a person is sitting inside a room them a the things, either living or nonliving that have surrounded him is counted as the environment of that room, same as their earth is full of living or nonliving organism which are the part of environment. Human, plants, animals, birds, weather, wind, sunlight, sand, soil, land, water. Coal, wood, fuels, fire, minerals etc are the part of environment which are essential for existence of life on earth.

As we all know this earth is made of four different spheres biosphere, lithosphere, atmosphere and hydrosphere in which hydrosphere is the largest part on earth among all. All the sphere contains some of the natural resources inside its category:

1. Atmosphere: Air, sunlight, weather, etc
2. Lithosphere: solid or rigid area of the earth, also we can say that the crust and upper mantle of the earth like land.
3. Biosphere: Biosphere is the area or zone of animal, bird and human.
4. Hydrosphere: the largest portion (about 75%) of the earth area where water is found in form of oceans.

Life on earth is possible due to some kind of action reaction between different kinds of resources that are available under environment.

Major Factors Regarding Environment:

- Environment consist different natural resources of air, water, land, soil, plants, sunlight, wind, coal or minerals that are useful and essential for the human life.
- Oxygen is highly needed for taking breath and plants produce oxygen by absorbing carbon dioxide.
- From tree we also get food, cotton and wood, those are the basic requirements of human life.
- For agriculture, we need natural resources of land, sunlight and water.
- Coal, gases and fossil fuels are used for generating electricity.

Current situation of environment and its reasons:

Currently, the situation of environment is so poor that could never be imagined by our old generations in previous time. We have continuously spoiled our environment by using its resources everywhere pollution is rapidly increasing on earth whether it is air pollution. Impurity element has involved in every era of environment. Due to desire of more technical advancement, we have forgotten the importance of natural resource in our life. Number of increased factories, industries, vehicles or other transportation causes the poor situation of air pollution in the whole world.

Effects of polluted environment:

Pollution in air may cause various diseases among people. So many new kinds of diseases has arise due to air pollution like lung cancer or heart disease, also sometimes brain damage problems in liver or kidneys etc.

Pollution in water is caused due to unlimited discharge of poisonous chemicals or other harmful elements from houses. Factories, hospitals or other places into water of pond, river, lake, sea or ocean. Various diseases arise from polluted water like typhoid, cholera, Jaundice, Dengue, Malaria etc.

What is solution for saving environment?

Solutions are many but all need proper action and support from all groups of people. Various organizations and firms are doing continuous efforts for saving our environment by publishing campaigns or advertisements, in which they indicate that how much this healthy environment is precious to us and how much careless we are towards our environment.

Swachh Bharat: Let's Join Hand Together for a walk of clean India Mission.

A pollution free clean India would be the best tribute to the nation. Swachh Bharat Abhiyan is a cleanliness mass movement organized by the Govt of India and takes into Mr.Narendra Modi. The primary aim of this prestigious campaign is to motivate people to make India pristine clean. "Swachh Bharat Abhiyan" with big hits and fire.

Conclusion:

Currently the situation of our environment is not so well and thus require quick attention from all side. Clean and green environment is the necessity of all living orfanisms on this earth. Fresh air, clean weather clean water lots of trees are the basic beauty of our natural environment and no one has right to damage or destroy it.

Latest Computer Software

Computer software: software is a part of a computer system that consists of data or computer instructions, in contrast to physical handware from which the system is built. In computer science and software enginerring, computer software is all information processed by computer systems, programs and data. Computer software includes computer programs, libraries and related non-executable data. Such as online documentation or digital media.

The latest software are classified in two types

1. System software

2. Application software

"System software" includes the programs that are dedicated to managing the computer itselg, such as the operating system, file management utilities, and disk operating system (or DOS)...."

"Application software" are often called productivity programs or end-user programs because they enable the user to complete tasks, such as creating documents, spreadsheets, databases and publication, doing online research, sending email desiging grapghics, running business and even playing games....etc"

Recent Advancement in Computer and Software Technology:

Over the last few decades advancement in computer and software technologies have reached an impressive level. these technologies improve not only very common areas of education, health, production, industrial and so on... thus recent advancements in computer and software technologies are the base for the society of tomorrow.

The feasibility of future development strongly relies on the existence of key technologies and their deployment. such as distributed parallel processing advanced software engineering, image processing and security solution's.

The objective of this special issue is to present a collection of articles that cover recent research result and comprehensive review on relevant computer and software technologies. In particular, it aims to present highly technical paper's describing the areas mentioned above distributed parallet processing, advanced software engineering, image processing, and security solutions.

Operating system: Which are essential collection of software that manager resources and provides common services for other software that run's "on top" of them supervisory programs, boot loaders shells and window system are core part of opereating system.

- Device driver: Which operate or control a particular type of device that is attached to a computer. Each device needs at least one corresponding device driver, because a computer typically has at minimum at least one input device and at least one output device, a computer typically needs than one device driver.

- Utilities: Which are computer programms designed to assist users in the maintenance and care of their computers.

Design and Implementation:

Design and implementation of software varies depending on the complexity of the computer software, example: Microsoft word software is usually designed and created in integrated development environment (IDE) like Eclipse, intelli and Microsoft visual studio. software and the application programming interface (API) that the under lying software provides like GTK, javabeons or swing and windows forms library is used for designing graphical user interface (GUI) application like "Microsoft word" and the windows communication, web services.

Data structure such as hash tables, arrays and binary trees and algorithms such as quicksoft, can be useful for creating software. computer software has special economic characteristics that make its design, creation, and distribution different form most other ecomic goods

A person who creates software is caused a programmes, software engineer or software developes

Conclusion:

Computer software security is a vast topic that is becoming more important because the world is becoming highly inter connected, with networks being used to carry out critical transaction. Good software prcatices can help ensure the software behave properly and safety critical and high assurance system designers haven always taken great latest computer software's

PATCH (COMPUTING)

Patch management is a part of lifecycle management, and is the process of using a strategy and plan of what patches should be applied to which systems at a specified time. A patch is a piece of software designed to update a computer program or it's supporting update data, to fix or improve it. This includes fixing security vulnerabilities and other bugs, with such patches usually called bugfixes or bug fixes and improving the usability or performance although meant to fix problems, poorly designed patches can sometimes introduce new problems (see software regressions) in some special cases updates may knowingly break the functionally, for instance by removing components for which the update provider is no longer licensed or disabling a device

TYPES

Patches for proprietary software are typically distributed as executable files instead of source code. This type of patch modifies the program executable –the program the user actually runs –either by modifying the binary file to include the fixes or by completely replacing it on early 8-bit microcomputers, for example the RADIO SHAK TRS-80, the operating system include a PATCH utility which accepted the patch data from a text file and applied the fixes to the target programs executed binary file (s) small in –memory patches could be manually applied with the system debug utility, such as (P/M'S DOT OR MS-DOS'SDEBUG debugger. Programmers working in interpreting BASIC often used the POKE command to temporarily alter the functionality of a system service routine.

Patches can also circulate in the form of source code modification in the case, the patches usually consist of textual differences between 2 source code file, called "diffs" this types of patches commonly come out of open-source projects.in these cases, developed except users to compile the new or changed files themselves.

Bulkly patches or patches that significantly change a program may circulates as "service packs" or as "software update" Microsoft windows NT and its successors (including windows 2000, windows XP, windows vista and windows 7) use the "service patch" terminology.

SYSTEMSSOFTWARE UPDATE

Software update system allow for updates to be managed by users and software developers.in the 2017 PETYA CYBERPANDEMIC the financial software "MC DOC"S update system is said to have been compromised to spread malware via its updates. On the Tor Blog cybersecurity distributed builds are likely the only way to defend against malware that attaches the software development and build process to infect millions of machines in a single, officially signed, instantaneous update. Update managers of LINUX such as synaptic allow users to update all software installed on their machine, application like synaptic use cryptographic checksums to verify source / local files before they are applied to ensure fidelity against malware.

CONCLUSION

While the issue of patch management has technology at this core it's clear that focusing only on technology to solve the problem is not the answer installing patch management software or unlnerability assessment tools without supporting guidelines. Requirement and oversight will be a wasted effort that will further complicate the situation instead, solid patch management programs will team technological solutions work together to address each organization's unique needs.

Technology Is Boon Or Bane

Technology is a blessing for man with technology there is a lot that we can do which we could not do then. With cell phones, web cam, you will be closer to someone miles and miles away so far yet so close!

This is our feeling when you talk through a cell phone to beloved one who is the many human lives saved because of the speedy notification via cell phones. Just think of how our teaching and learning have become more novels, stimulating, exiting and engaging with the use of multimedia in the classroom, with your TV, we can watch events as they happen all over the globe.

Computers are a big boon to children as they not only help them with their education their knowledge in many ways. Many of us use computers in our daily life. Whether we are studying for a degree, connecting with friends, sending off a job application or watching a video online. The internet can be something that we really rely on. Computers help us in storing data, staying in touch, staying informed, essential for study, sharing our ideas, speeding up calculations, staying organized.

Despite the many ways in which they make our lives easier, they are nevertheless several disadvantages to computers and the internet.

Tricky to learn, Being disconnected, Isolating, Eye strain, Poor posture, The loss of traditional arts

MOBILE PHONES:

There is no doubt that mobile phones have brought a revolutionary change in this electronic world it has become one of the fundamental means of communication.

Mobile Phones bring constant interruptions, especially, teenagers are bombarded with notifications, messages, updated facebook, comments etc. every minute in such circumstances it is up to us how they handle the situation. They are convenient, they help us to stay connected, keeps us informed, getting snap happy, knowing where we are, a handy touch.

The internet has easy access for twenty four hours a day using data when there is no wifi available. As a consequence most teenagers isolating themselves from their family, going to their rooms and constantly texting, posting messages, updating facebook, showing off photos. Their behaviour has changed. They prefer to be left alone with their mobile rather than communicating with parents and family.

SOCIAL MEDIA:

The first and main advantage of the Social Media is connectivity people from anywhere can connect with anyone, regardless of the location and religion. The beauty of Social Media is that we can connect with anyone to learn and share your thoughts.

Social Media also create awareness and innovate the way people live. It is the Social Media which has helped people discover new and innovative stuffs, that can enhance personal lives from farmers to teachers, students to lawyers every individual of the society can be benefit from the Social Media and its awareness factor.

TELEVISON (T.V.):

Television is a striking creation of science in the world of technology. Everything has boons and banes so television also has many boons and banes. Television is a resource that can be used to educate and entertain people of different ages. It is the most up-to-date means of spreading thoughts and ideas. It is a way of pictographic communication. It broadcast news, music, interviews of famous people, different programs and a variety of other things.

Television has also done a great job in the field of education. There are many quiz shows on television which increase the knowledge of students, school often use television as a way of educating students as on television they can expenses many things that cannot be done in the classroom. The people who are disabled to go out can pass their time by watching T.V. although television has given us all these boons and facilitates but we should also be aware of the bones. It has bad effects on children. Some students neglect their studies because of television watching too much television can be injurious to our eyes and health. In general, if television is used in a good way than it is a useful invention. However, if it used in a bad way than it has many bad effects.

NEWSPAPER:

Newspaper is a necessity in modern life. It is now printed in almost all languages and in all countries of the world. It gives us news of what is happening in the world. We get various information relating to politics, religion, economy, society, movies, food etc...from the newspaper.

Newspaper provides us all sorts of information locate national and international. We must know about the events that is happening everyday in the field of politics, civil life, industry commerce, fashion, sports, scientific achievements, arts and soon. They yield must influence and power.

It may spread communal hatred and format rebellion or revolt illiterate people are not able to read newspaper. They have to depend of others to read load the contents for them.

Many papers serve a particular interest and give biased views. Therefore people should not be led away by false news or by the views of particular paper. They should exercise their own judgement and form their own opinion.

CONCLUSION:

Technology has laid on extension burden on irreplaceable resources and through it has increased human potential. It has subsequently reduced human limits. Advancement in technology is a boon to human mankind as well as a bane if misused which risks our life and nature

SIMRAN BANU
B.COM VI SEMESTER, B Section

</div>

Present Education System

Education in India is provided by the public sectors as well as the private sector with control funding coming from three levels central,state,and local. Under various articles of Indian constitution free & compulsory education as a fundamental rights to children between the age of 6 to 14.

Students go through many exams in their learning years. It teaches to analyze our strengths and weaknesses consistently. These days a lot of positive changes are happening in the education system of India

Rote learning , emphasis on memorizing the facts rather than thoroughly understanding The concepts completely relying on text book. Giving more important to text books then the Teacher there is no autonomy to teachers. Students have no freedom to think creatively And to question the content in the text books. Taking marks as assessment of student talent when marks can be easily obtained by memorizing the pre- written answer from the text books.

Students are not being thought why they are learning the particular subjects and topics. Text books do not mention

The topics are relevant in the practical life. Rise of coaching centers for competitive exams and private tuitions for school children are in resulted by the poor education system which could not make students job ready our text books do not mention the important of physical activity and the extra curricular activity most of the school in India do not have play grounds not encouraging research and innovation shortage of text books for government school students .

The national policy on education was framed in 1986 and was emended in 1992 new education policy (NEP) is going to be formed in 2016 to bring revolutionary changes in India education system. Rashtriya Madyamika Abhiyan 2009.

This scheme aims to enhance access to secondary education and to improve its quality. Vidyanjali scheme, 2016 – to encourage extra circular activities in students.

Rashtraiya Uchchatat Shiksha Abhniyan(RUSHA),2013 – A mission a finance massively in state universities. But this wasn't successful as expected.

There is a dire need for revelatory changes in the India's education system not just the syllabus and pedagogy, but also the attitude change towards the marks system need to be changed with the effective learning system, India can be successfully utilized its vast human resources.

There is no incentive for teachers to encourage critical thinking in children lack of infrastructure Most of the syllabus is in theoretical form. Dearth of capable teachers in government schools. Low salaries of teachers. Pressuring students for marks and grades. Student's suicides are increasing day by day. Students are learning the subjects just to reach to next level. That is obtaining admission from the good college.

Indian government is spending only 3% of its GDP on education. As the government unable to invest enough in the education sectors, private institutions roped in and the result in high cost of education. No control of government on fee structure of private educational institutes. Ethics aren't bringing thought in schools and the results of this in many educated persons lacks ethics. Very low teachers to student's ratio. As a result, teachers are not able to concentrate on each and every child. According to right to education, there should be one teacher for every 30 students.

High prices of higher education in India. India government isn't investing in the higher education aspirants.

<div align="right">

Jyothi laksmi

</div>

Modern System V/s Gurukuls

"Education is not the learning of facts, but the training of the mind to think" – ALBERT EINSTEIN

Every parent will want their child/children is/are good at studies and settle down at the best positions. Few parents believe that education is the only means of leading a peaceful and luxurious life and hence, force their children to only concentrate on studies. Not many of the parents allow their wards to take up what they are interested in.

A child is put into the temple of learning at the age of 2 or 3. Every kind will have a different way of thinking before being put to the school. For example before being put to the school when a kid is asked 'what is 'A' for?' it would give a different answer. But once they get into the school, the individual capacity of children are suppressed and made uniform.

Examinations are conducted for the students to check their ability, grasping power and memory. Children with high intelligence quotient would excel with very good marks but, it is not only marks that define the ability of a student. A student with very less marks also may have the best talent. Most of the parents would only want their children to get the highest marks, not all parents encourage their children to develop the skills they possess. Parents do not release that there are many things other than the usual classroom studies.

In the ancient days, children were sent to gurukuls at the age of 5 or 6 years to excel in the talent they are keen at. They were kept away from the usual luxury and the homely nature. At the gurukuls the saints or the gurus would find out what is the hidden strength and once found the child trained to expertise in the skill. For example during the period of the pandavas when the five sons of kunti were sent to the gurukul, the guru first tested what was the hidden skill in each of them and trained them accordingly. Like Arjun was good at aiming and thus was expertised in archery. In the gurukul they were taught even the mean difficulties of life, like the life of a poor man who lacks even the basic necessities of life. According to valamiki Ramayana even Rama was sent for begging during his tenure in the gurukul thus the kids were able to learn how to face the dynamic life in every possible way.

In the present scenario, every kid is sent to the school are made to learn the same text book and a bound syllabus in a very luxurious classroom with all comforts required where their parents want only a cent percent in the marks sheet. Children of these days experience only comforts and become very nervous when a difficulty stands against them. They always prefer someone to stand beside them and guide as to how to overcome the difficulties. Children are given the moral values and knowledge of difficulties only in the theoretical classes and lack the ability to go through the challenges and believe that their parents would stand along with them at every mode of life.

The education system today is not a curse but it has fenced the thinking of an individual. Not every child is good in studies is the best ever person. Every hidden talent has a value and needs to be encouraged. Every child must be taught things which he loves and likes to get skilled in. children must also be educated with the thorns of life. Education is not preparation for life; education is life itself. Thus apart from text books and being practical there are lot more things to learn, which were taught best at the gurukuls.

Save Environment
{SWACHH BHARAT}

INTRODUCTION:-

Our natural environment & surrounding provides us with everything that we ever need. We get air, water, food, & everything else from the environment. Swachh Bharat in India is to clean up the streets, roads & infrastructure of India's cities, smaller towns, & rural areas.

WHY SHOULD WE SAVE ENVIRONMENT?

- Global warming is a serious environmental issue. The continuous emission of carbon dioxide by thermal power generating units is the leading cause for the surge in greenhouse gases.
- Natural resources are limited. If the natural resources such as oil, coal, etc,.. are used, one day the world may fall short of these resources.
- High-level of environmental pollution is detrimental for human & animal health.
- Forests are fast depleting. It may cause soil erosion & drought situation.
- Excessive use of pesticides & contamination of soil negatively affected soil output. These fruits & vegetables are not very healthy for human health.

HOW TO SAVE ENVIRONMENT?

- We should save drinking water. Water is a precious component of our environment. It should never be wasted.
- The use of environment unfriendly materials such as plastic should be discouraged.
- Instead of dumping domestic garbage in the pond, lake or river, these should be done.
- Safe environmental friendly car & vehicles should be used. For short distances, people should be encouraged to use bicycle in place of motor based vehicles.
- We can make donations to NGOs that are engaged in planting trees, or in any-way working towards saving the environment.
- A lot of environmental problems would disappear if we stop using petroleum, coal & natural gas as raw-materials for power generation. The focus should entirely shift on renewable sources of energy.

RECYCLE & REUSE

Recycle & reuse-whatever & whenever you can. This is the best measure to save the environment. A simple way to do this is to reduce the use of rubber & plastic. Instead, use paper bags & cardboard containers.

SAVE WATER

Water is very important natural resources. It's we who waste it, pollute it. The simplest ways to save water-turn off the water taps after use. Water is so precious; we can't waste or pollute it.

MAINTAIN YOUR VEHICLES

Maintain your vehicles in good condition. It may not be possible to go cycling or walking everywhere check engine oil levels regularly. Check air pressure in tires, fuel injection pump in good condition. Consider getting a catalytic converter fitted in your vehicle. This way you are curbing air pollution.

WALK MORE, DRIVE LESS!

Choose to walk short distances instead of taking your car every time. Go walking to the gym, to work {if it's not very far}, go walking to run errands or use a bicycle. Both cycling & walking are good exercises. This controls air pollution, saves fuel.

PLANT MORE TREES

Choose an open area/ground near your residence or work place. Unless there's any law restricting you from growing trees in that area, go ahead, grow tree. Plant a tree & encourage all to do green stretch of land.

SWACHH BHARAT ABHIYAN

Swachh Bharat Abhiyan[SBA] or [Swachh Bharat Mission] {SBM} or Clean India Mission is a campaign in India that aims to clean up the streets, roads & infrastructure of India's cities, smaller towns, & rural areas. The objectives of Swachh Bharat include eliminating open defecation through the construction of household-owned & community-

owned toilets & establishing an accountable mechanism of monitoring toilet use. Run by the Government of India, the mission aims to achieve an Open-Defecation Free [ODF] India by 2nd October 2019, the 150th anniversary of the birth of Gandhi, by constructing 12 million toilets in rural India at a projected cost of 1.96lakh crore.

SLOGAN:- One step towards Cleanliness.

LAUNCHED:- Raj Ghats, 2nd October 2014; 3 Years ago by Narendra Modi.

It is India's largest cleanliness drive to date with 3 million government employees, school students, and college students from all parts of India. The mission contains two sub-missions:- Swachh Bharat Abhiyan["Gramin" or Rural], which operates under the Ministry of Drinking water & sanitation & SBA[Urban], which operates under the Ministry of Housing & Urban Affairs.

PLANNED INITIATIVES:- The Government appointed PWD with the responsibility to dispose off waste from Government offices. The Ministry of Railways planned to have the facility of cleaning on demand, clean bed-rolls from automatic laundries, bio-toilets, dustbins in all Non-Ac coaches. The centre will use its Digital India Project in conjunction with the SBA to have solar powered trash cans, which send alerts to sanitation crew once. The Swachh Bharat Swachh Vidyalaya Campaign was launched by Smriti Irani, of the Minister of Human Resource Development, Government of India by participating in cleanliness drive.

Sai Preethi
**IV Sem BSC FAD**

Technology Is Boon Or Bane

Technology today is an integral part of everyday life. Rapid growth of technology has increased the pace of life. We virtually move with our thoughts and todays technology becomes out dated tomorrow. Today, people meet and chat over the internet with likely to meet in persons. Family interactions as had been known earlier, are no longer in vogue at the traditional dining room at home.

The mobile phone in the pocket today is an important as the shirt on the body. In the absence of the mobile phone, life appears insecure. Some institutions today prohibit the use of mobile phone within their premises. The loss of or misplacement of mobile phone creates a panic which was absent yesterday when the brain took care of storage of memory and timely delivery of output without SIM cards. Technology has thus combined innovation with tension. Technological development and innovation are welcome to modern society but there are always two sides to a coin. Roads may be broad but there may be a pathole at some point. Traffic may be smooth but accidents do takes place. It is a boon and as well as a bane to the society.

Chaithra .k.v

Present Education System

Students go through many exams in their learning years. It teaches to analyse our strengths and weaknesses consistently. Indian education system emphasizes competitive spirit. Competition teaches students to unleash their full potential. Indian schools teach basic knowledge in all subjects. Annual system in schools years helps slow learners. These Days a lot of positive changes are happening in the education system of India. Emphasis on practical knowledge is increased.

Rote learning emphasis on memorizing the facts rather than thoroughly understanding the concepts. Completely relying on text books. Giving more importance to text books than the teacher. There is no autonomy to teachers. Students have no freedom to think creatively and to question the content in the text books. Taking marks as assessment of students talent when marks can be easily obtained by memorizing the pre written answers from the text book. Students are not being taught why they are learning the particular subjects and topic. Text books do not mention how the topics are relevant in the practical life. There is no incentive for teachers to encourage critical thinking in children. Lack of infrastructure.

New education policy is going to be formed and to bring revolutionary changes in Indian education system. Rashtriya madyamika abhiyan, this scheme aims to enhance access to secondary education and to improve its quanlity.Vidhyanjali scheme to encourage extra circular activities in students. Rakshtriya uchcatar shiuksha abhiyan. A mission to finance massively in state universities. But this wasn't successful as expected.

USA is spending in the education sector where as Brazil is spending. China invests heavily in its students and universities. In the times higher education world reputation ranking, China could grab nine position in the universities list. There is a dire need for revolutionary changes in the India's education system. Not just the syllabus and pedagogy, but also the attitude change towards the marks.

Latest Computer Software

Computer software, or simply software, is a part of a computer system that consists of data or computer instructions, in contrast to the physical hardware from which the system is built. In computer science and software engineering, computer software is all information processed by computer systems, programs and data. Computer software includes computer programs, libraries and related non-executable data, such as online documentation or digital media. Software is written in high-level programming languages that are easier and more efficient for programmers to use because they are closer than machine languages to natural languages. High-level languages are translated into machine language using a compiler or an interpreter or a combination of the two. Software may also be written in a low-level assembly language, which has strong correspondence to the computer's machine language instructions and is translated into machine language using an assembler.

The first piece of software was written by Ada Lovelace in the 19th century, for the planned Analytical Engine. However, neither the Analytical Engine nor any software for it were ever created.

This eventually led to the creation of the twin academic fields of computer science and software engineering, which both study software and its creation. Computer science is more theoretical, where as software engineering focuses on more practical's. However, prior to 1946, software as we now understand it—programs stored in digital computers. The first electronic computing devices were instead rewired in order to "reprogram" them.

Types:

Application software

Which is software that uses the computer system to perform special functions or provide entertainment functions beyond the basic operation of the computer itself.

System software

which is software that directly operates the computer hardware, to provide basic functionality needed by users and other software, and to provide a platform for running application software.

Operating systems

which are essential collections of software that manage resources and provides common services for other software that runs "on top" of them. Supervisory programs, boot loaders, shells and window systems are core parts of operating systems. In practice, an operating system comes bundled with additional software (including application software) so that a user can potentially do some work with a computer that only has one operating system.

Device drivers

which operate or control a particular type of device that is attached to a computer. Each device needs at least one corresponding device driver; because a computer typically has at minimum at least one input device and at least one output device, a computer typically needs more than one device driver. Programming tools are also software in the form of programs or applications that software developers (also known as programmers, coders, hackers or software engineers) use to create, debug, maintain, or otherwise support software. Software is written in one or more programming languages; there are many programming languages in existence, and each has at least one implementation, each of which consists of its own set of programming tools. These tools may be relatively self-contained programs such as compilers, debuggers, interpreters, linkers, and text editors, that can be combined together to accomplish a task; or they may form an integrated development environment (IDE), which combines much or all of the functionality of such self-contained tools.

Design and implementation:

Main articles: Software development, Computer programming, and engineering. Design and implementation of software varies depending on the complexity of the software. For instance, the design and creation of Microsoft Word took much more time than designing and developing Microsoft Notepad because the letter has much more basic functionality. Software is usually designed and created(coded/written/programmed) in integrated development environments (IDE) like Eclipse, and Microsoft Visual Studio that can simplify the process and compile the software. As noted in a different section, software is usually created on top of existing software and the application programming interface (API) that the underlying software provides like GTK+, Java Beans or Swing. Libraries can

be categorized by their purpose. For instance, the Spring Framework is used for implementing enterprise applications, the Windows Forms library is used for designing graphical user interface (GUI) applications like Microsoft Word, and Windows Communication Foundation is used for designing web services. When a program is designed, it relies upon the API. For instance, if a user is designing a Microsoft Windows desktop application, he or she might use the .NET Windows Forms library to design the desktop application and call its APIs like to close or open the application, and write the additional operations that it needs to have. Without these APIs, the programmer needs to write these APIs Companies like Oracle and Microsoft provide their own APIs so that many applications are written using their software libraries that usually have numerous APIs in them. Data such as hash tables, arrays, and binary trees, and algorithms such as quick sort, can be useful for creating software. Computer software has special economic characteristics that make its design, creation, and distribution. A person who creates software is called a programmer, software engineer or software developer, terms that all have a similar meaning. More informal terms for programmer also exist such as "coder" and "hacker" – although use of the latter word may cause confusion, because it is more often used to mean someone who illegally breaks into computer systems.

Top five advantages of the Latest software

1.Reduced time to benefit: Different from the traditional model, in the software (application) is already installed and configured. The user has the advantage of provisioning the server for an instance in cloud and in a couple hours they can have the application ready for use. This reduces the time spent in installation and configuration, and can reduce the issues that can get in the way of the software deployment.

2. Lower costs: has a differential regarding costs since it usually resides in a shared or multitenant environment where the hardware and software license costs are low compared with the traditional model. Another advantage is that the customer base can be increased since it allows small and medium businesses (SMB) to use a software that otherwise they would not use due to the high cost of license.

Maintenance costs are reduced as well, since the provider owns the environment and it is split among all customers that use that solution.

3. Scalability and integration: Usually, solutions reside in cloud environments that are scalable and have integration with other offerings. Comparing with the traditional model, users do not have to buy another server or software. They only need to enable a new offering and, in terms of server capacity planning, the provider will own that.

4. New releases (upgrades): providers upgrade the solution and it becomes available for their customers. Costs and effort associated with upgrades and new releases are lower than the traditional model that usually forces the user to buy an upgrade package and install it, or pay for specialized services to get the environment upgraded.

5. Easy to use and perform proof of concepts: offerings are easy to use since they already come with best practices and samples inside it. Users can do proof of concepts and test the software functionality or a new release feature in advance. Also, they can have more than one instance with different versions and do a smooth migration. Even for large environments, users can use offerings to test the software before buy it.

IBM has embraced the advantages has built a portfolio of over 100 applications which solve critical business needs for our clients.
